Fatal Work Injuries in Arizona – 2014

Fatal work injuries totaled 86 in 2014 for Arizona, the U.S. Bureau of Labor Statistics reported today. Regional Commissioner Richard J. Holden noted that while the 2014 count was preliminary, the number of work-related fatalities in Arizona declined by 9 over the year. Fatal occupational injuries in the state have ranged from a high of 118 in 2000 to a low of 55 in 1993. (See [chart 1](#).)

Nationwide, a preliminary total of 4,679 fatal work injuries were recorded in 2014, up from a revised count of 4,585 fatalities in 2013, according to results from the Census of Fatal Occupational Injuries (CFOI) program. Final 2014 CFOI data will be released in the late spring of 2016.

Chart 1. Total fatal occupational injuries, Arizona, 2005—14

NOTE: Data for 2014 are preliminary.
SOURCE: U.S. Bureau of Labor Statistics.

Of the 86 fatal work injuries reported in Arizona in 2014, 33 resulted from transportation incidents and 16

from violence and other injuries by persons. Other major event categories were exposure to harmful substances or environments (14) and falls, slips, or trips (12). (See [table 1.](#)) Within transportation incidents, roadway incidents involving motorized land vehicles was the most frequent type of workplace fatality with 20 deaths. This category accounted for nearly one-quarter of all on-the-job fatalities in the state. (Note that transportation counts presented in this release are expected to rise when updated 2014 data are released in the late spring of 2016 because key source documentation detailing specific transportation-related incidents has not yet been received.)

In the United States, transportation incidents were also the most frequent fatal workplace event in 2014, accounting for 40 percent of fatal work injuries. In Arizona, transportation incidents accounted for 38 percent of the state's share of fatalities. (See [chart 2.](#)) Violence and other injuries by persons or animals was the second most frequent type of event nationally, with 16 percent of work-related fatalities; the share in Arizona was 19 percent. Exposure to harmful substance or environments accounted for 16 percent of the nation's workplace fatalities, and falls, slips, or trips accounted for 14 percent. In Arizona, these events were responsible for 8 and 17 percent of workplace fatalities, respectively.

Chart 2. Fatal occupational injuries by selected event, Arizona and the United States, 2014

Additional highlights:

- The construction industry had the largest number of fatalities in the state with 17, compared to 13 the previous year. Falls, slips, or trips accounted for six fatal work injuries in this industry (See [table 2.](#))
- Transportation and warehousing had the second highest fatality count with 15. Transportation incidents accounted for the largest number of deaths in this industry.
- Transportation and material moving occupations had the highest number of fatal work injuries with 28.

Motor vehicle operators suffered 17 deaths and material moving workers, 7 fatalities. (See [table 3](#).)

- Men accounted for 81, or 94 percent, of the work-related fatalities in the state. (See [table 4](#).) Transportation incidents made up 37 percent of these fatalities.
- In Arizona, 53 percent of those who died from a workplace injury were white non-Hispanics. Nationwide, this group accounted for 68 percent of work-related deaths.
- Workers 25-54 years old—the prime working age group—accounted for 51, or 59 percent of the state’s work-related fatalities in 2014. Nationally, workers in this group accounted for 60 percent of on-the-job fatalities.
- Of the 86 fatal work injuries in Arizona, 93 percent worked for wages and salaries; the remainder was self-employed. The most frequent fatal event for wage and salary workers was transportation incidents.

Technical Note

Background of the program. The Census of Fatal Occupational Injuries, part of the BLS occupational safety and health statistics program, compiles a count of all fatal work injuries occurring in the United States during the calendar year. The program uses diverse state, federal, and independent data sources to identify, verify, and describe fatal work injuries. This assures counts are as complete and accurate as possible.

For technical information about the CFOI program, please go to the BLS Handbook of Methods on the BLS web site at www.bls.gov/opub/hom/pdf/homch9.pdf.

Federal/State agency coverage. The Census of Fatal Occupational Injuries includes data for all fatal work injuries, whether the decedent was working in a job covered by the Occupational Safety and Health Administration (OSHA) or other federal or state agencies or was outside the scope of regulatory coverage. Thus, any comparison between the BLS fatality census counts and those released by other agencies should take into account the different coverage requirements and definitions being used by each agency.

Acknowledgments. The Bureau of Labor Statistics appreciates the efforts of all federal, state, local, and private sector entities that submitted source documents used to identify fatal work injuries.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.
